

Word of The Institute of Statistics, cairo university

I have the honor to introduce our great institute through the mission that rose from our professor's thoughts. Our institute's mission is to take and to keep the lead of statistical work in both regional and international levels. A lot of responsibilities are needed to devote our efforts for achieving our goals and that's in order to keep this statistics lead.

One of our main goals is to provide new information from different undergraduates students to create new post-graduates in the field of statistics, demography, operation research, and computer sciences. The core for achieving that through a new approach is known by manufacturing training which gives a good chance to fill full the needs of the labor force market.

We are very proud to have different resources either in academic departments or as centers for applied demography and human resources, centre of econometrics and applied statistics, and programmatic training centers of Data Base and Software Research and consultations for the researchers and different agencies.

Dr. M.Naguib Abd Al Fattah
Dean

About of The Institute of Statistics, cairo university

The Institute was established in 1947 under the name of “The Institute of Statistics” and was associated with the Department of Statistics at the Faculty of Commerce, Cairo University. Enrolment at the Institute was opened to University graduates to study for two years towards a Post-Graduate Diploma in Statistics. In 1949, 13 students were graduated. In 1957, the status was changed to enable diploma holders to register for the M.Sc. and Ph.D. degree in Statistics.

In 1959, the Institute stopped enrolling students because of changes in the university organization. In 1962 it was re-established as an independent entity after a presidential decree was issued.

The name of the Institute was changed to “The Institute of Statistical Studies and Research”. The first class graduated in 1963 and included 17 students. The Institute has granted various diplomas, in statistics and different other fields.

They are as follows:

- 1 In 1973 a study of Computer Science began. It was later developed into the diploma of Computer and Information Sciences.
- 2 In 1975 a diploma in Demography was established.
- 3 In 1977 a diploma in Operations Research was established.
- 4 In 2005 a diploma in Information system was established.

Holders of a diploma in the field of Statistics, Demography, Operations Research, or Computer and Information Sciences, were allowed to obtain M.Sc. and/or Ph.D degree in their respective fields after meeting the enrolment requirements. Furthermore, graduates of the Faculty of Engineering, the Faculty of Science, and the Faculty of Economics and Political Sciences were given the chance to obtain M.Sc. in Statistics, Demography, Operations Research and/or Computer and Information Sciences directly without having to obtain a diploma, however they were required to have at least a minimal grade of “good” in their first degree, and to be full time students.
