

13.3 Environmental education measure

13.3.2 CU as a body has a university Climate Action plan, shared with local government and/or local community groups.

Cairo University appears to conduct education programmes and awareness campaigns on climate change risks, impacts, mitigation and adaptation:

- 1- **The 1 st evidence** is Sustainability planning & strategy documents — CU has a formal Sustainability Plan and publishes annual Sustainability Reports (2023 and 2024) describing mitigation/adaptation actions, energy projects, waste management and community engagement. These are the closest items to a campus climate roadmap but they are not presented as a discrete “Climate Action Plan” co-signed and distributed to local government/community groups.
- 2- **The 2 nd evidence** is CU Sustainability Report 2023 (full report).
- 3- **The 3rd evidence** is Sustainability Report 2024 (includes energy, waste, hazardous waste metrics).
- 4- **The 4th evidence:** Faculty of Media — Panel on Climate Challenges (May 8, 2024)
Activity: Panel — public discussion on climate risks from environmental journalism perspective.
