

2014 Meetings and Courses

International Centre for Genetic Engineering and Biotechnology

Workshop “Biotechnology Aspects of Monoclonal Antibodies Production and Engineering”

9-21 August 2014 Cairo, Egypt

Organiser: Haggag Salah Zein Mostafa (Cairo University, Egypt)

Co-organisers: Yousry Mohammed Hashem, Ahmed Nagib El-Sayed Sharaf, Naglaa Abdelallah and Iman Bakr Shaheed (Cairo University, Egypt)

Mohammed El-Sayed (Holding Company for Biological Products & Vaccines - VACSERA, Giza, Egypt)

Requests for information and applications directly to:

Within new therapeutic molecules, therapeutic monoclonal antibodies (mAbs) hold promises for the treatment of a variety of diseases, including chronic inflammatory diseases and cancer. Recent success with genetic engineering applications are opening the door to a vast array of potential applications of monoclonal antibodies.

The programme of the Workshop will include theoretical and practical sessions, offering hands-on training at the Core Laboratory Facility of the organising institute.

Twenty participants will be selected from a variety of disciplines and academic backgrounds, including principal investigators, medical doctors, postdoctoral fellows, graduate students, research assistants, sales associates and equipment engineers. Applicants are anyway expected to have experience in molecular biology, and hold at least a Master Degree or equivalent.
